WGR Demon Throne Quickstart Guide

Updated for June 25, 2022

WG Realms: Demon Throne is a standalone game that runs on the EDuke32 platform. This document contains some simple instructions for getting the game started. Credits and other information about the game can be seen within the game. More detailed credits can be found in DEMON THRONE CREDITS.txt

To install and run:

- Unpack the folder Demon Throne v3.0 from the DEMONTHRONE300.zip file.
- Run eduke32.exe to start the game.
- Press Mouse 1 (fire) to end the opening cinematic
- Before starting a New Game, scroll down and select Options to configure the game

Configuration:

As with any mouse and keyboard shooter, you should configure the mouse and keyboard to your liking. Demon Throne uses several new functions different from regular Duke 3D:

ALT FIRE (mouse 2 by default)
SWITCH CHARACTERS (must be unlocked in game before it actually works)
GAME GUIDE (very useful for learning about how to use various features)
POW KEY (A powerful magical ability that is explained in game)
DASH (must be unlocked in game before it actually works)

You should assign each of those to suitable keys or buttons from the setup menu before starting a game.

Troubleshooting:

If you encounter other problems, please contact us. Our public Discord server can be joined with this link: https://discord.com/invite/jNrKdk5 and we have a bug reports channel. You can also find me at duke4.net forums, where I go by the name "Danukem".

Obviously, any information contained in this readme could be invalidated by future events.
